

**Subject: Application – Junior Database Operations / Database Support
Position**

Dear HR Team / Hiring Manager,

I am applying for the Junior Database Operations / Database Support position because I have completed targeted MS SQL training and have documented portfolio projects, and I would like to further deepen my knowledge in a real production environment.

In my previous operational and administrative roles, I became accustomed to precise documentation, regulated processes, and a responsible, system-oriented way of working. This mindset is especially important to me in database operations.

During my training, I worked with SQL Server installation, backup and restore processes, permission management, and database design fundamentals. I also developed structured and well-documented solutions in my own projects.

I am looking for a team where I can continue learning in a junior role and, in the long term, grow into a reliable database operations professional.

Kind regards,
Magyar Gyula
